

Reinforcement Learning - Detailed

Concept

Reinforcement learning is inspired by behavioral psychology.

An agent learns by interacting with the environment and receiving rewards or penalties.

- 1 Agent-environment interaction
- 2 Reward-based learning

Key Components

Important elements that define reinforcement learning systems.

- 1 Agent
- 2 Environment
- 3 Actions
- 4 Rewards
- 5 Policy

Applications

Widely used in advanced AI systems.

- 1 Game playing (AlphaGo)
- 2 Robotics
- 3 Self-driving cars
